

APV

Baro-VNAV

This course covers the Baro-VNAV design criteria, including the benefits, limitations and operational requirements of the APV Baro-VNAV approach. It provides the necessary information to interpret charts and information as published.

Some of the topics covered in the course:

- General
- APV/Baro-VNAV criteria (PANS-OPS)
- New cartographic elements
- Temperature corrections
- Future possibilities

Each topic ends with a quiz to test the students level of understanding, and can be delivered to work within an LMS environment for automatic registration of completion etc. if desired.

The course can be delivered including all topics, or with a selection of topics as requested.

Target population: ATC and aircraft operators.

Estimated duration: 30 min.
